

ABSTRACT OF THE DISCLOSURE

A word game and method of playing the word game. The word game has a plurality of letter indicator members, each having a letter indicia corresponding to a selected letter or choice of letter, each letter indicia being assigned a predetermined point value for use in calculating an initial score value of a word formed from a random selection of the letter indicia. The game further includes a plurality of score manipulation members, each having a scoring indicia for manipulating the initial score value and determining a final score of the word. The score manipulation members are arrangeable in a random order from one game to the next.
